

# Make the Most of Learning in Your Space

In this webinar, we discuss how to maximize learning in your setting, and we practice a strategy called Mind Mapping. Use the steps and space provided to try this strategy for yourself.

## Mind Mapping Steps

### 1. Choose a Topic

Hone in on a topic to think and brainstorm about. Set clear parameters to really define the concept before you begin.

### 2. List Categories

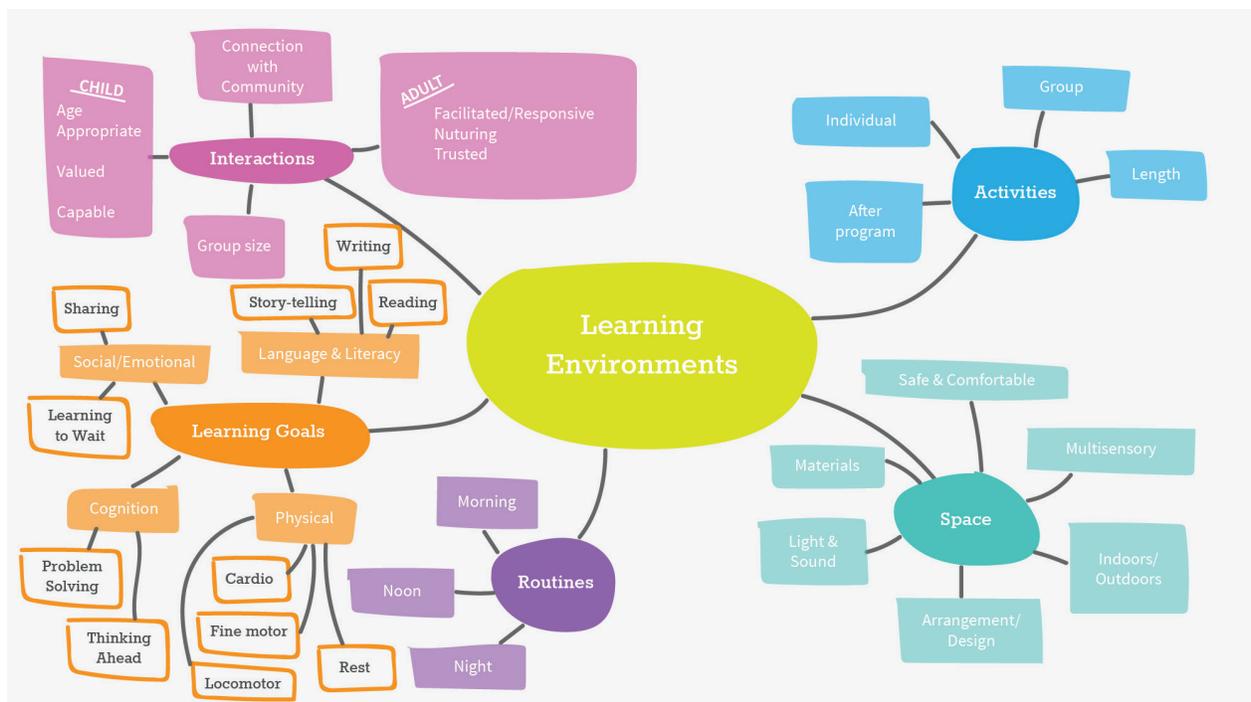

Begin “branching out” from your center. Create spaces for categories that describe your topic of choice.

### 3. Describe Categories

Go more in-depth to describe categories in detail. Create as many “layers” as you’d like to give a full “picture” of the topic.

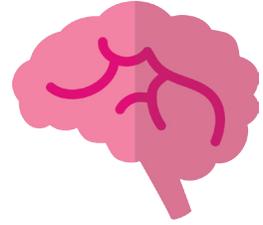

### 4. Make Connections

Explore the relationship between categories and descriptors. Ask questions, get creative, and dream BIG!
